Sales Analysis Dashboard Using Excel

Project Overview

- This project focuses on analyzing retail sales data using Microsoft Excel to identify key business insights.
- The goal was to transform raw sales data into an interactive dashboard that helps track performance and support data-driven decision making.
- Key Objectives

- • Analyze sales and profit trends
- Identify top-performing products
- Understand the impact of discounts on profitability
- Create an interactive Excel dashboard

Business Problem

- Companies generate large volumes of sales data, but extracting meaningful insights from raw data can be difficult.
- Without proper visualization, it is challenging to:
- • Identify top-selling products
- Track regional sales performance

- Understand the impact of discounts on profit
- Solution
- Build an Excel dashboard that provides clear and interactive sales insights.

Dataset

- Dataset Used
- Superstore Sales Dataset
- Dataset Details
- • Total Records: ~10,000
- Industry: Retail Sales

- Important Column
  - • Order Date
  - Region
  - Category
  - Sub-Category
  - Sales
  - Profit
  - Discount

Data Cleaning

- Data Preparation Steps :
- Before analysis, the dataset was cleaned and prepared.

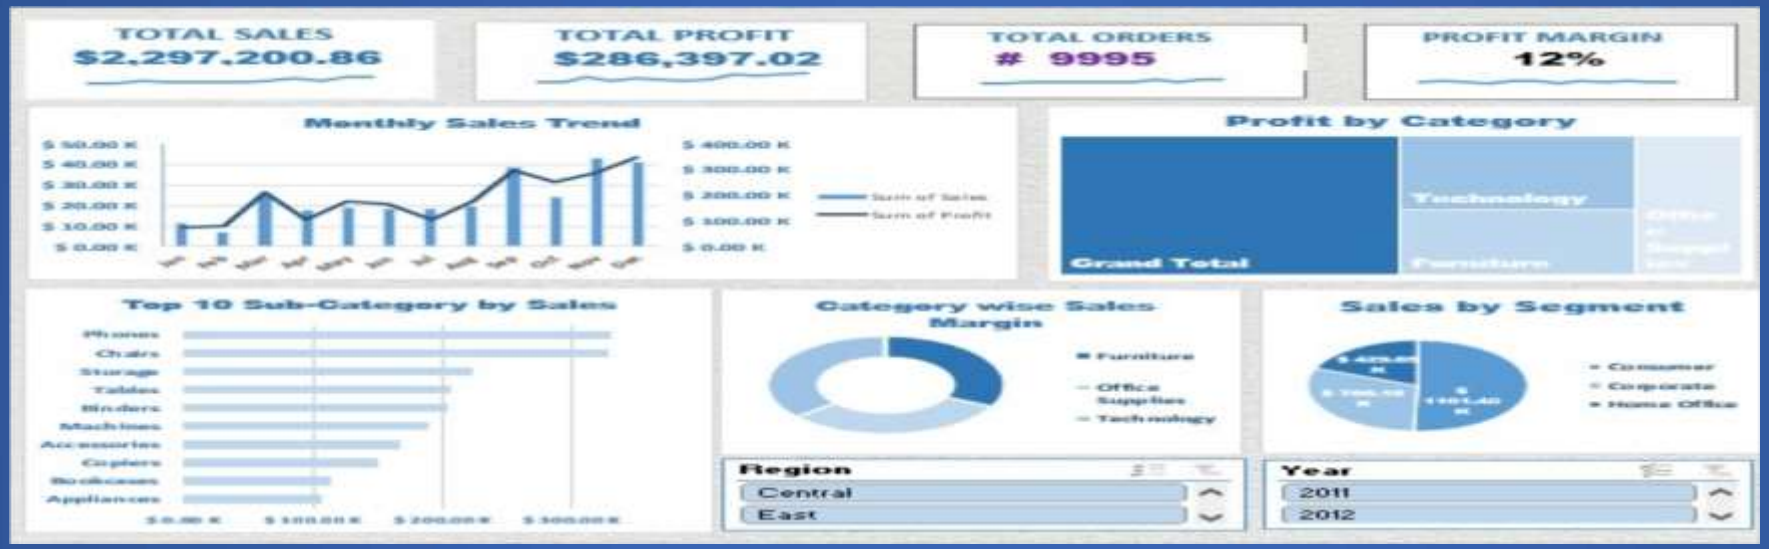
- Steps performed:
- • Removed duplicate records
- Checked for missing values
- Corrected data formats
- Created calculated fields
- This ensured accurate and reliable analysis.

Tools and Technology

- **Tools Used**
  - Microsoft Excel

- Techniques Applied
- • Pivot Tables • Pivot Charts
- Data Cleaning
- Conditional Formatting
- Slicers for filtering • Dashboard Design

Dashboard Visualization



- The dashboard provides a visual summary of key sales metrics.
- It includes:
- • Sales by Region
- Profit by Category

- Top 10 Sub-Categories
- Discount vs Profit analysis
- Users can interact with the dashboard using filters and slicers.

Pivot table

- This analysis present monthly sales and profit performance for the year
- Sales and profit increase significantly in the last quarter(SepDec) with December showing highest profit
- The total yearly sales reached 2.29M,generating

2.86

M in profit

Key insight

- **Insights Discovered**
- • Technology category generated the highest profit
- West region recorded the highest sales
- High discounts sometimes resulted in negative profit• A few sub-categories contribute significantly to total revenue

Recommendation

- **Recommendations**
- Based on the analysis:
- • Reduce discounts on low-profit products
  - Focus marketing efforts in high-performing regions
  - Increase inventory for top-selling categories
  - Monitor discount strategies to protect profitmargins

Outcome

- **Project Outcome**
  - This project demonstrates how Excel can be used to transform raw data into actionable business insights.
  - **Skills Demonstrated**
  - • Data Analysis
  - Data Visualization
  - Dashboard Development
  - Business Insight Generation

Thank You
